FDAS ASSUMPTION

1. The FDAS need to keep the history of the building such that when the building is rebuild, FDAS know its old building number, size, etc.
2. Work_History table is using a surrogate key.
3. When a building is rebuilt, the FDAS can just add new building into the property
4. When a building is destroyed or repaired, there is a column to store the information just for that on building (e.g. 'D' for destroyed, 'R' for repaired, and 'O' for original)
